

Dave Warren (pictured) has started his own company called Connect a Phone. net. Dave, from Milford is a time served electrician and also worked for B.T. for 10 years. Outside of work, Dave is a musician and likes to invent, he's even built his own solar panel which supplies his home with hot water.

Dave specializes in residential and small business telephone and broad band faults and installation, at less than half the price of the major service providers. He can also provide T.V. & Sky points. Dave comments: "The advantage with using my services is that you can talk directly to some one who can understand you and not keep you paying to listen to cue music and give a quote or estimate over the phone."

#### Installation

Broad band filtered sockets can be run directly to the computer to give the best possible broad band signal and with a filtered front plate can eliminate the need for dangly filters around the house.

Usually wires can be run externally so no wires are visible inside. Dave uses only quality external grade or internal wire with a choice of colour. Burglar alarm cable is no longer good enough for high speed broad band.

If you experience any sort of fault with your broad band or telephone line, it could be well worth giving Dave a call – he could save you a lot of money.

For more information or to arrange for Dave to come along and visit call him on 07729 037667.

## Website of the Month

[www.saynoto0870.com](http://www.saynoto0870.com)

This site lists a large number of well known companies who are notoriously hard to contact. Their equivalent geographical numbers are listed and often Freephone numbers too. Alternatives are listed for 0800, 0808, 0844, 0845, 0870 and 0871 numbers.

Some companies that use these numbers are actually receiving a cut of the phone call costs.

Search by the company name to find an alternative number in the database and a list of alternative numbers is displayed so you can choose which department to call direct. If you know of a way of by passing the expensive numbers and the alternative isn't listed, you can add a new alternative number yourself.
